REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance. The prior art made of record in the attached form PTO-892 considered to be pertinent to the submitted application.

Matsuoka et al. US # 4,383,206 disclose a door operation control including forward and reverse rotation of the motor and stoppage by a control circuit responsive to operation command signal, and an upper, and lower limit signals, and an obstruction detection signal, and maximum drive time over signal. Wherein upon generation of obstruction detection signal or maximum drive time over signal during the closing operation the control circuit controls the motor in a manner to open the door for a certain period of time, and after application of an operation command signal the control circuit is set in a manner to open the door again.

Catlett et al. US # disclose an electronic sliding door system provided with a sensor that sensing a body pressure near the door to provide for door opening for a predetermined amount of time. A speed control circuit is operated in response to berrf caused by door blockage to reduce the conductivity of the semiconductor device whereby motor rotation and thus door movement is stopped as long as door blockage is present.

However, none of the prior art teaches or suggests in combination the use of:

- A control circuit coupled to an abnormality detector and coupled to the motor for controlling motor operation and including means for determining when a predetermined time period after control circuit ceases operation of

the motor and resumes operation of the motor in response to both an expiration of the predetermined time period and detecting means indicating that the abnormal operation has ceased.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
